Existence of Allah in the light of logics and Science

ABSTRACT

There are thousands of proofs and witnesses for the existence of Allah in this vast universe. But these signs are for those who ponder and pay heed to the signs of Allah and who believe in them. But some people are blind despite of having eyes, some are deaf despite of having ears and some are dumb despite of having tongue. They just see what they want to see but they ignore and do not see what they should have seen. For them Allah says:

Allah has sealed their hearts and their ears and on their eyes are covers/ layers...

The above signs are clear proof of Allah's existence and power for those who possess wisdom. The people who belong to the religions other than Islam, also confirm and believe in the Oneness, power and existence of Allah the Almighty

Introduction

Majority of people related to almost all the religions believe in the existence of Allah. But still there are such type of people who do not believe in the existence of Allah. They believe that the creation of this Universe was just an accident and the system is going on automatically due to some actions and reactions etcetera. They do not believe that there is some One, Who runs this whole amazing system of the Universe.

But there is answer for them in every section of life. Philosophers have tried to guide those unbelievers through their philosophical and logical way according to their own approach, while the religious scholars have argued according to the knowledge of religion and on the other hand the scientists have given strong arguments to make people believe in the Power, Oneness and the Existence of Allah. Even some non-Muslim scientists believe that the Holy Quran is the book of Allah, Muhammad s.a.w is the messenger of Allah, and Allah the Almighty is the Creator of this Universe and He is the Only One Who runs the system of the universe.

Hindus believe in the existence of Allah but they make partners and assistants with Him. Christians believe in the existence of Allah but they believe that Hazrat Esa a.s was the son of Allah and Jews also believe in the existence of Allah but they say that Hazrat Uzair a.s was the son of Allah. While Muslims strongly believe in the Existence of Allah, His Powers and Authority and Oneness. They reject the concept of progeny, parents or the partners of Allah at any level.

We are here supposed to discuss the existence of Allah but His attributes of Oneness and Omnipotence cannot be excluded completely. So we need to give touch of Allah's Oneness and Power where ever necessary.

Confirmation of a European Physicist

The page from the diary of *Allama Inyatullah Khan al-Mashriqi*, a popular Pakistani mathematician unveils a conversation between him and *Sir James Jeans*, an English pioneer scientist of the Atom Physics and an astronomer who is famous in the West as “Einstein the II”.

Al-Mashriqi says:

“When I was in the United States for educational purpose, I used to meet with Sir Jeans frequently. Once he invited me for a dinner and the following conversation was hold between us.”

- **Al-Mashriqi:** Mr. Jeans! I have observed that unlike other scientists you are very religious man. Mostly the more people do research

in science; the more they go away from the religion. But you are very punctual to attend Church. What do you say about it?

- **Jeans:** As a Physicist, I analyze the physical structure of the Universe, Where I see a wonderful art exhibition. This great Sun, Stars and Planets etc. are just a few items of that exhibition. As I looked out in the cosmos, the more I examined the vast expanses of space and the tremendous complexity of these things, the more the universe seemed to be one gigantic thought of a pure mathematician. God must be that best expert.

- **Al-Mashriqi says,** I sat down besides Mr. Jeans and he continued explaining how earth was created and was made very suitable for living on it for all the creatures. While he was devotedly explaining wonderful administration of Allah throughout the universe. He stated about the galaxies, and how they are kept under the control of Allah in this very vast universe. He took my attention to the signs of Allah in the heavens and in our bodies as it is mentioned in the verse no 53 of Surah al-Fussilat. *"Soon We shall show them our signs in the furthest horizons, and in their own bodies, until it becomes manifest to them that this (Allah's Oneness and Greatness) is truth."* He explained each and everything very enthusiastically and at one place he said:

I wonder, how human learn the science, explore their own body under the light of Biology science and search about this great universe and as a result become very familiar about perfectly designed nature surrounding them and after all how they still don't believe in God, the Almighty!

- **Al-Mashriqi:** Sir! In the Quran there is a verse: *"Only those very great, knowledgeable scholars can be respectful and fearful of Allah enough."* (Surah al-Fatir, 28)

- **Jeans:** What was it? Wonderful! Extraordinary! It has taken me 50 years of continuous study and observation to realize this reality. Did Muhammad say that?

- **Al-Mashriqi:** No Sir! But he (s.a.w) reported from Allah! These are the words of the Holy Quran.

- **Jeans:** If so, you can record my testimony that the Quran is the Book of God. Muhammad was an uneducated person. He could not have expressed this enormously important fact on his own. God must have taught it to him. Incredible!

Statements by some physicists who support the existence of Allah and acknowledge His attributes.

Descartes, the French philosopher, said 'Even though I know I'm imperfect, I realize at the same moment that there must be a Perfect Being and I feel it necessary to believe Him. This feeling was entrenched in me by that Perfect Being which is God.'

In his statement he affirms his weakness and confirms his belief in the existence and perfection of Allah. He says that these feelings and perceptions are a gift from Allah.

According to me he confirms the innate nature made by Allah, which He has made human as referred in Surah al-Room 30:30.

Isaac Newton, the well-known English physicist, the discoverer of the law of gravity said: 'Don't doubt the Creator, because it is unbelievable that coincidences alone could be the controller of this universe.'

Herschel, the English astronomer, said: 'The more we explore the universe the more unquestionable evidences we attain for the existence of Ceaseless Creator with inestimable power.'

Herbert Spencer, Devotion to science is a silent reverence. It is not a tribute of formality, but a tribute expressed practically. It's not only blatanthonor, but an honor proved by the sacrifice, thought, and effort.

He then continues to give examples to clarify that what did he mean?

'A scientist who looks at a drop of water and knows that it is made up of oxygen and hydrogen in definite magnitudes, in such a way that if these ratios change, it would become something else other than water. As a result he believes in the Power, the Wisdom and great Knowledge of the Creator more firmly as compare to an ordinary person who sees it merely as a drop of water. In the same way, a scientist who looks at a hailstone through a microscope and observes the magnificence of its design and the brilliance of its structure, undoubtedly realizes the Greatness of its Creator and His Wisdom more assuredly as compare to one who does not know anything about it more than that it is frozen rain.'

The above words of cosmologists in this regard are valuable. We have quoted those statements so that our young generation may realize that their religion is from Allah the Almighty and that science can only reinforce and support their Emaan (faith). Allah, the Glorious, reveals in Qur'an-e-Majeed:

Soon We will show them our Signs in the (furthest) regions (of the earth), and in their own souls, until it becomes manifest to them that this is the Truth. Is it not enough that thy Lord doth witness all things?

A young man returns from abroad with three questions.

A young man returns from abroad after completing his higher studies. He came back with three questions. Most of the knowledgeable people were not able to give him a satisfactory answer. He met a religious scholar and asked him the questions.

1. Does Allah exist? If yes, show me His shape.
2. What is fate (Taqdeer)?
3. If Satan is created from fire, how could he be punished with fire?

After listening his questions, the scholar slapped him on his face!

The young man asked him, why are you getting angry? Your anger proves that you don't have answer of my questions. You should have answered my questions by knowledge.

The scholar said, it was not my anger, but rather was the answer of your questions.

1. Did you feel pain? The young man replied yes. Than the scholar said, it means the pain exists. The young man said, off course. The scholar said if you believe so, Show me its shape! The young man was speechless. The scholar said it was the answer of your first question.

2. The scholar asked, did you dream last night that I will slap you in public? The young man replied no. the scholar asked did you even think about this before getting slapped. He replied no. than the scholar said, it was the answer of your second question, and it is called Fate (Taqdeer).

3. Now the scholar asked him, you are made up of flash/clay and my hand was also made up of flash/clay, than why did you feel pain? How did you get punished? The young man was speechless again. The scholar said this was the answer of your third question. The same way Satan will feel the torment of fire even though he is made up of fire.

The amazing universe calls us to believe in the Existence and Power of Allah.

This wonderful cosmos having a symphonic mandate, extra ordinary balance, perfect intellectual design and orderly planning. The rotation of the Sun, Moon and other heavenly bodies within their particular orbits, coherence of seven skies one above another without any defect and imperfection is just a little example for it. Thus every design points to its designer, everything must have its producer and as we know that every letter must have been written by someone.

Why can't Human Eyes see Allah?

The human eye can see the visible light (Spectrum). It is the portion of the **electromagnetic spectrum** which is detectable to human eye.

■ A usual human eye responds to wavelengths from about 380-750 nanometres (nm).

As a product of this, human eyes cannot detect the things having wavelength shorter than 380nm or longer than 750nm.

So, it is a clear answer to the question frequently asked now a days by some ignorant and ill-educated people that If Allah exists than why can't we see Him?

If we are not able to see all the creatures of Allah, such as Gamma Rays, X-Rays, Ultraviolet Rays, Infrared Rays, Television, Radio and FM waves or many gasses present in the environment in our surroundings, how can we see the Creator of them? We have a limited capacity of seeing the things we need to see in this world.

Another Mercy of Allah on us by making our sense of hearing limited.

■ The sense of hearing is also limited like all other senses.

■ So, we can't hear too low or too loud sounds.

- The Earth rotates on its axis at about 1000 miles/hour i.e. 1600km/hour, and
- It moves around the Sun at about 67000 miles/hour i.e. 107200 km/hour!
- Hence, the Earth produces a very high pitched voice or sound in every second.

Thanks Allah, for creating our senses that much limited.

If we had the capacity of hearing every sound that vibrates too slow or too large, we would not have been able to have rest at all, or able to talk to each other even.

Cosmic Web, another proof of Allah’s Existence and Power.

Astrophysics unveils:

- After the Big Bang there were density fluctuations Called Ripples which seeded the development of large structure as the clusters of our universe are arranged into filaments of clusters and super clusters intertwined into the celestialnetting.

In Quran: **وَالسَّمَاءِ ذَاتِ الْحُبُكِ**

- (By the sky with (its) HUBUK numerous tracks).
- Quran mentions that sky has "HUBUK" which has several meanings all of them describe the facts cited above.
 - a- Hubuk are the fibres when they are intertwined resolutely in a cloth (web).
 - b- Hubuk is that we see on the surface of the sand by the effect of slow wind, which we delineate as wave marks.
 - c- Hubuk are the surface features in water due to passing of soft air through it.
 - d- Hubuk are the breaking (rippling) everything even the rough hair.
 - e- Architecture with stars, the galaxy and paths of stars.

Honey kills Bacteria that resists antibiotics.

A scientific study assures that Allah (s.w.t) provided honey with natural antibiotics that kills harmful bacteria.

A new scientific study has shown that honey has distinct features that support to guard against microorganisms. Honey also has high proficiency to fight microbes that grew their immune systems against high quality drugs even.

Honey, in the old and recent ages, has frequently been used as a natural remedy for many diseases. This new learning might be a new turn to use honey for health purposes.

As per the research work done in the Sidney University in Australia, Dekarter, a science teacher in the natural and bacteriological science says that their study has proved that honey can substitute several antibiotics being used for the cure of wounds such as gels, lotions and various creams. She further says, most of the germ-triggering infections at least overcome to one sort of antibiotic. It means it is hard to fight the bacteria, because we need to recognize first the type of antibiotic which they can't fight by choosing from among the variety of antibiotics or sometimes we need to make some newer generation antibiotics. But the honey fight all sort of bacteria and has the capability to cope with according to the enemy's strength and tactics.

Honey is a complex composite which consists of Eight Hundred molecules. This difficulty level makes it hard for scientists to fully understand its system of resisting and destroying the microorganisms.

Dekarter says: "We have not yet found the technique which honey uses to cope the bacteria but most likely there is the molecule "Methylglyoxal", available in honey, which counters with other molecules not been discovered yet. Honey has the capability to prevent bacteria from increasing and producing new generations which can be able to resist to antibiotics."

According to the research of Doctor Rose Koper, from Wells University, in her book "Honey facing cuts" she declares that, high sugar level, low water level, and low acidity are some of those factors which bless honey with high cure capability.

Honey is a healing for people:

Rasulullah (s.a.w) said: '*Honey is a cure for every ailment and the Qur'an is a therapy for all illness of the soul, so I advise you both remedies, the Qur'an and honey.*'

(Sahih Bukhari)

These new explorations discovered by researchers which surprise them are mentioned by Allah in Holy Quran 1400 years ago in a chapter named "An-Nahl" which mean Honey Bees. *'And your Lord guided the bee to make its hives in hills, on trees and in (men's) habitations..... there comes from within their bellies a liquid of different colours, which is cure for mankind. Surely in this is a Sign for those who ponder'*.

(Surah An-Nahl:68-69).

Honey is useful for treating burns, cuts, pyorrhea, cold and virus infections and it is good for skin. So, we must have honey and use it both as food and medicine; particularly for children!
