Research study of astrology in the context of science

¹Maazullah, ²Fakhar ud Din

ABSTRACT:

Islam is also a complete code of life as well as religion that monitors all the variations that belong to human and universe's appearance and external existence. It is a Muslim fact that Islam gave humanity based on lightweight in the Greek philosophy, and provided modern science basis. Today's period of science is far away. Therefore, the right and outstanding publication of religion in the present can be better performed on modern scientific basis. In this period, the need for this period is more than the last centuries that Muslim societies should promote the promotion of modern science connecting religious education to scientific education, and the truth should be said to Islam. So, today's Muslim student is a mutual relationship between religion and science to understand the light of the Quran and Sunnah.

Keywords: Astrology, modern scientific basis, scientific education, religion and science.

Introduction to Astronomy

"In general understanding, which we say basics, the praise, subject, and order, must be written in the beginning of these four affairs, because these four affairs are usually mentioned in the beginning of every art. The definition of Regarding the famous historian "Ibn-e- Khaldoon" writes in the "muqaddima ibn-e-khaldoon":

"هو علم ينظر في حركات الكواكب الثابتة والمتحركة والمتحيرة"¹

"This is a knowledge that is discussed with the actor and united movements."

Allama Ibn-e- Khaldoon writes as praise:

"ويستدل بكيفيات تلك الحركات على أشكال وأوضاع للأفلاك، لزمتم عنها هذه الحركات المحسوسة بطرق هندسية.

كما يبرهن على أن مركز الأرض مباين لمركز فلك الشمس، بوجود حركة الإقبال والإدبار، وكما يستدل بالرجوع والاستقامة للكواكب، على وجود أفلاك صغيرة، حاملة لها، متحركة داخل فلكها الأعظم، وكما يبرهن على وجود الفلك

الثامن بجملة الكواكب الثابتة، وكما يبرهن على تعدد الأفلاك للكوكب الواحد بتعداد الميول له، وأمثال ذلك."²

"Otherwise, it is proven to be on the basis of the actual principle by the quality of the fact that the Center is in addition to the movement of the land center that the Center is in addition to the sky, and proves the existence of small minorities for such a wisdom, which is within. There is dynamic. And as the obstacles of the Philosophy are the existence of the way. And such as the same stars give evidence of the flakes of the same stars. And there are sons of Seeds that are counted in the problems of this art".

The purpose and benefit of knowledge astrology

The research is that when a person does an action, he or she has some effect on the action, which is also called fruit and result in general terms. What are the aims and objectives of astronomy? And in what sense is its fruit? According to the scholars, all these things are in view of their need. According to the people of Jamiat-ur-Rasheed,

"Its aims and objectives are different."³

Different aspects of astronomy in the Holy Quran

The demonstrations of the creation of Allah Almighty in this knowledge are incredible but often unbelievable. The United States and the combination of the United Kingdom's railway, the beauty of the universe is balanced in a special way. This balance is the real beauty of this universe, which contains millions of billions of galaxies compounds are circular around the center of universe. In these clusters, a great series of galaxies and billions of stars in every galaxy are traveling in compliance with the first order of "Creator" for a group of planets consisting of their own system.

In the system of senses, Allah has presented innumerable precedents and proofs of His power and these precedents and proofs are described by the Holy Qur'an as different methods and methods. We believe that movement is the first principle of this system of accident and the universe. On the other hand, we have come to understand that motion is the real permanence and stability of this universe and peace is a sinful death of this universe.

The great moment of the creation of the universe and the sensory system was the greatest moment since the race of time began. The secret of this world can only be revealed when the scientific secret of the creation of the universe is revealed. Contemplation of creation is the best way to reach the Creator. Allah, the Exalted, then said in the description of the attributes of His benefactors that my beloved servants are those who remember me standing and sitting in every situation and at the same time meditate on the creation of the universe. By contemplating the creation of the universe, they inevitably realize the greatness of the Creator of the universe, and the matter goes beyond immature faith to belief.

A review of the celestial stars

"Flaming hydrogen and helium spheres, spaced hundreds of thousands of kilometers apart, are scattered all over the universe. The automatic nuclear radiation inside them is seen scattering light everywhere. Stars. They are so bright because of the gases burning inside them. When the first creation of the universe took place, the Big Bang resulted in the birth of gas roosters from every hundred scattering materials. As the density increased and they took the form of relatively dense bodies, huge clouds of gas and dust began to shrink inward due to gravity, which gave rise to the stars. The atoms kept colliding and rubbing against each other, causing heat and energy to be released. As a star contracted, the energy was released so rapidly. I grew more and more, so bright and shining stars came into existence."⁴

"There is a great deal of sunrise from the sun to the sun, which is called around the sun, which is called. The Comet coming towards the sun. Halle's Comet is ', which comes to the scene every 76 years after her very high birthdays. The British Expert Astronomy' Edmund Halley (Edmund Halley) saw it in 1682 and predicted that it was 76 years later It will be seen again in 1758, so its figures came right and they appeared in 1758. The last time he came near the sun on February 6, 1986. The many spacecrafts on this day Sent. The spacecraft of the European Space Agency (ESA) Giotto goes

close to it and took pictures of the eligible land, in which we have been able to understand the structure of the Domestic Stripes of Hella and especially Heller. 'Hello's Comet Tara' again, 29 will pass through the sun on April 29, 2061."⁵

The state of the sun and structure

"The Qur'an, which is the main source of this subject, mentions the sun, which is the largest repertoire of heat for our earth, without which there is no possibility of any kind of plant, animal or human life on earth."

"It is the most outer and thick surface of the sun and is 2 million kilometers (200,000km) deep. From here the light reaches the outer environment of the sun. How light comes out of the cover for you an example Due to water, when water receives the heating energy available on the water, the water mechanisms get the integral energy and separates each other (breaking the power of attraction) and the liquidation of the gas So it is less than the gas molecules above the surface of the water and become bubble on the surface, it is caused by the bubble energy and when the energies were excluded in the environment. Similarly, when the sun There are reasons in the cover and due to extreme energy, the source comes towards the lower level above the surface and the bubble is like a bubble and excludes energy that is the whole solar system namely system solar It reaches, because this bubble is huge, some are also the size of the earth, so they also exclude large amounts of energy. They also call them sales cells; their duration can be taken from 5 to 10 minutes to 24 hours."⁶

"The part of the outer surface of the sun is relatively low, the Black Sun Spot is seen. Some spots are Sun Spots are also larger than the ground. This is the stamping 3800K while the sun level is generally The Temporary is 5800K. The outer surface of the exterior that we can see is called Photo Empire, it is spread to 400 kilometers outside the outer surface of the sun. It's more than this is lineal and above the Corona It is present. As the external environment of the sun will go to the internal environment, it will be blurred too transparent."⁷

"If someone did a sky dive and passed through the clouds, all the surfaces of the sun would feel like clouds, ignoring the temperature. The energy inside the sun comes out in the form of photons. But it takes many years for these photons to get out of the inner surface of the sun because as they come out of the inner surface the atmosphere will become denser and the photons will collide with molecules, ions and electrons in this way. I will take a long time. Because the sun is very hot, plasma is made up of plasma (the fourth state of matter) or let's say the sun is the plasma."⁸

"Two ideology is described about the existence of the solar system. According to the first theory, a billion years ago, no one spent near the sun and collided with which a large part of the sun was broken. Those who surrounded the pigs after being banging in many small pieces. This piece is called the planet. According to another theory, the system has come to a large cloud of solar gas and dust. Solar gas billions ago I was in the form of clouds of clouds. Due to gravity, every (Atom) begins near millions of years. Time passed in the form of time. It was later. Later it became several pieces."⁹

"The primitive part was collected on the center. The remaining ten percent of the part was broken into many crimes and the portion of the batch started rotating on the center, the planet was called the planet. Due to itself the sun began to shrink and then began to be small and warm. That's why it started to be a nuclear fusion, resulting in the sun and the light was born in the sun. He scattered the solar system, the ideology of France in 1796 Mathematical Pearl Simon Leola's had given. The same theory has been recognized after the existence of the moon and museum.

"The way the earth and the solar stars are surrounding the sun surrounding the sun and the way around the Galaxy, including millions of stars of the sun galaxies, there is a rotation around the great black hole located in the middle of the Galaxy, exactly the moon is in circulation around our land. There is often their own moon around the planets, and most of the moon are different. A circle of 27.321661 is set in groundwater days. The diameter of the moon is 3,475 km and it is bigger than the last planet of the solar system. Rotation he is on the same side of the ground. His axial and annual rotation the duration is equal, which means that it is equal to one day and one year. As well as its axis rotates, as well as the same proportions around the earth and so that land He succeeds in keeping his own way. " ¹⁰

"The moon is a planet of our land. There is no two million forty thousand miles away from the ground. His diameter is 2163 miles. The initial investigation of the moon was in 1609. He said that the moon is like a land like our land. He also expressed the view that the mountains are present on the mountains and volcanic mountains. It has not happened in the moon. Due to which there is no human being on the moon. Heard it It has been proven through the ships. It is a tough heat in the daytime and the night is cold. This difference occurs within an hour. " ¹¹

"The day of the moon is equal to our fifteen days. It meets a cycle in 29 or 30 days around the earth. The moon's orbit is growing around the earth - the average distance is growing from the ground. Lunar and Islamic month it is set to the sun and the sun. The moon does not give us just a little light on the night, but also creates a part of it in its attractive. Scientists have reached the result that the moon has reached the geology is simpler than the geology of the earth. The moon layer is approximately mile thick. And this is a rare stone mixed with an injury site. " ¹²

"There are different ideas about the moon's Haiti, an idea is that it was a planet who walked near the earth, and the gravity of the earth put it in its own. This theory has been popular, but scientists it is objection that the moon will have to come to a special route near the ground with a particular direction, which is likely to be very low. Scientists think 4.6 billion years the first a Comet Star stressed from the ground, with the ground, with which the substance of Comet and the earth came out of the earth. Slowly this substance became the moon and became the moon. Water and such the elements that were easily bowed, and the rest of the element became part of the moon. The concept of this theory also is that the density of the moon is almost equal to the density of the earth's density, and iron in it the amount of the quantity is very low. Because the part of the pushed into the earth, which made the earth pulse. The scion on the computer has

strengthened this theory"¹³

"The moon completes its 360 degrees in a period of 27 days, 7 hours, 43 minutes and 11.6 / 11.5 seconds, and comes back to the same place. But here is a great deal of attention Since the earth is rotation around the sun in the same direction, and it is set to be 27 levels of your orbit around the sun in the same time, so now the moon also has to take 27 levels of additional distance every month. Good stars regarding the position of the moon, a moon is 360 degrees, but due to rotation around the earth, it increases 27 levels and 387 to fulfill it around the earth the level of distance is to be fixed. It requires more time to fix 27 levels. That is why the duration of the penalty month 27 days, 7 hours, 43 minutes and 11.6 / 11.5 seconds 29 days, 12 Hours, 44 minutes and 2.8 seconds. Due to 29 days and 12 hours, the moon creates a month in 29 or 30 days and due to the remaining 44 minutes and 2.8 seconds, more than two months continuously become 30 days and this difference also accomplishes automatically in a natural way and we do not have to change anyone in it."¹⁴

The benefits and purpose of Earth laying

"The earth is the third planet by the sun in eight planets of the solar system. The color is the planet. The earth is called Earth in English and it is our residential planet. And after the "Terra" or "Gaia" Earth is the third closest planet from the sun"¹⁵

The Big Bang in the authenticity of the universe is still close to the most popular and realistic, and 13.5 billion years ago, describes the beginning from a point of universe. At the beginning of the universe, which became the biggest (stars and others), as a result of their collision and distribution, one of which was also our sun, which existed 5 billion years ago. And after some time of the sun, the result of many collapses came into existence. Earth is about 4.6 billion years old. When the earth separated from the sun, even the smaller ingredients were bumping from the earth and together, in the result of this collision, the planet, their moon cabin belt and other solar system components came into existence, one of which also our land Was Small ingredients near the earth either collapsed from the earth or became part of the earth or walking around the earth, one of the rotating ingredients is constantly circulating around their land and is called the land of the earth. That's why our land is the same moon. The future may be that no big rock or stone system enter the solar boundaries or the system solar system, passing through the ground and became the land of the earth. "¹⁶

"When the earth came into existence, its temperature was very high. Then the temperature was reduced over time. Indeed, when the earth exists in existence, it is definitely from the rest of the stars, or gases and dust and the result of the collapse of the other ingredients will come to existence. At this time the temperature of the earth was the highest temperature at the ground. At the time of 2000 degree centigrade lived more. Everywhere on the ground was melted. Slowly the temperature was reduced, but it took several million years to reduce it. To change the temperature on the ground and to identify so much temperatures, it is so easy Not to go past today and keep the temperatures less than or more than a sequence. Lawry's boiling and resort to the flame of volcanic mountains, studying the structure of their rocks, all this is the

past I tell the story of the earth. The temperature on the ground slowly decreased in many million years and launching life, the system was looking for the sole planet of the solar system. "17

Physical condition of heavenly stars (Constellations)

"Barj" is a literal meaning and exhibition and palace. The stars of the stars in the sky look like that as the loud palaces are decorated. They have been fortified when vicious if the powers seem to fly towards the sky, they should be fired on their fortresses, so that the stars of the stars have been called "Constellations". Here, the type of sky is meant to eat. These flaws of stars in the sky are clearly appreciated that the person who has prostrated the universe, is not enthusiastic "18"

"When you look at the bass from the ground or by another planet, you are surrounded by seven magnetic fields that reach the endless (infinity) of the bacterial bass. The system universe from the ground the observation of (COSMOS) is from the following method"19

1. Those aerial field that we combine with our solar system "is the first sky".
2. Our field of arena makes aerial "second sky". The magnetic field is currently recently discovered that the Magnetic field is perfectly formed "West" inside the strip of stars.
3. Our local shock of self-determination makes the third sky.
4. Universe, the main magnetic field that shows the signals of the intentions, is "the fourth heaven".
5. The universal strip which shows semi-naughty radiation. "The fifth sky" is.
6. The field of spreading universe that shows the back-to-art. The "sixth sky" is.

The outside of the world is the heaven who is the endless manifestation of the universe "is the seventh sky".20

"The main thing is that the Quran just mentioned the seven heavens, it does not leave the subject matter, but also lights the latest material interpretations in the context of knowledge of universal physics." With the sorry, some interpreters have said law against the research of seven heavens, while I understand the verses of the scientific verses according to Allah's command, yes, it is necessary that the investigation and ideas can also change But Allah has invited the place. There is no need to go and it is in Quran all the power and all kinds of knowledge. The knowledge of the truth is only Allah, and the knowledge of the universe is only and the power of the universe only the occupation is in power, it is also one of the many signs to obey, which is described in the above verse. Earth for human beings created the sky and everything and sent to the Qur'an and Muhammad Muhammad for spiritual upset."21

Estimation period of earth birth

"When the earth came into existence, its temperature was very high. Then the temperature was reduced over time. Indeed, when the earth exists in existence, it is definitely from the rest of the stars, or gases and dust and the result of the collapse of the other ingredients will come to existence. At this time the temperature of the earth was the highest temperature at the ground. At the time of 2000 degree centigrade lived more. Everywhere on the ground was melted. Slowly the temperature was

reduced, but it took several million years to reduce it. To change the temperature on the ground and to identify so much temperatures, it is so easy Not to go past today and keep the temperatures less than or more than a sequence. Lawry's boiling and resort to the flame of volcanic mountains, studying the structure of their rocks, all this is the past I tell the story of the earth. The temperature on the ground slowly decreased in many million years and the launch of life, was searching for the sole planet of the solar system. ²²"

"The earth is not only the house of human beings, but also the universe in the universe, where the existence of life is found. Life starts at its level almost a billion years ago. Land But the suitable atmosphere for the birth of life (such as the exact distance from the sun) was not only already available but since the origin of life, the living creatures have also changed the planet's environment and other environmental conditions. The environment has presented the present. In the presence of oxygen in the earth's environment, it is also part of those living creatures. ²³"

"Maximum temperature at the ground is 56.7 ° centigrade average 15 ° c century and minimum temperature is negative 89.2 ° centigrade, air pressure in the atmosphere is 101.325 kg Pass let, which is best for life, according to area About 71% of the surface of the ground is the ocean of salt water, the remaining 29% include continents and all the earthquakes etc. Water is the beginning of life and water is necessary for all types of life which is currently ours the system is not aware at the level of any other planet in the solar system. In the same way the gravity of the earth carries various factors in space, especially in the sun surrounding the sun and pull around the land of the moon. 366.26 times in its axis completes 365.26 solar days in its axis, and the formation of different seasons is possible due to 23.4 ° degree tilt in its rotation axis. Its average speed 29.78 km per second and 107200 Km is cutting down in your axis at the moment's speed, we call a full circle one day while the earth our sun The rotation in the orbit completes 365.256363004 days in the day, we say years. ²⁴"

The first creation of the earth is in three main layers, Bhopal, Bhatpara and Kurd. The outer layer of this is in liquid condition called. creates a magnetism or magnetic field (gravity) in the ground by following a solid iron and nickel layer (Inner Core). The outer space (Outer Space), I process with other items including sun and moon. The earth cuts around 366.26 times its axis, the length of time is a naughty year, which is equal to 365.26 solar days. The distance from the age to 149,600,000 kilometers, during the sun reaches eight minutes to light from the sun. The distance from the moon is 384,000 kilometers to weighs 5.9736×10^{24} kilograms that digit 5,973,600,000,000,000,000 kg, 5.9 scattered, while the sun is 333,000 times more than our land. This gravity is 150,000,000 km the distance is more powerful than the magnetic attraction reaching the planets of the sun. There will be no one around the earth in this stereotypical circle of earth, more than the distance of the sun will take away from the reach of the earth. ²⁵"
